## Rna def

RNA is made up of strands of four different bases that match up in specific ways. The bases are elements of the set  $B = \{A, C, G, U\}$ .

**Definition** The set of RNA strands S is defined (recursively) by:

Basis Step:  $A \in S, C \in S, U \in S, G \in S$ Recursive Step: If  $s \in S$  and  $b \in B$ , then  $sb \in S$ 

where sb is string concatenation.

Examples:

To define a set we can use the **roster method**, the **set builder notation**, and also ...

New! Recursive Definitions of Sets: The set S (pick a name) is defined by:

Basis Step: Specify finitely many elements of S

Recursive Step: Give a rule for creating a new element of S from known values existing in S,

and potentially other values.

The set S then consists of all and only elements that are put in S by finitely many (a nonnegative integer number) of applications of the recursive step after the basis step.
