## Ratings encoding

In the table below, each row represents a user's ratings of movies:  $\checkmark$  (check) indicates the person liked the movie,  $\checkmark$  (x) that they didn't, and  $\bullet$  (dot) that they didn't rate it one way or another (neutral rating or didn't watch).

Person	Fyre	Frozen II	Picard	Ratings written as a 3-tuple
$P_1$	Х	•	1	
$P_2$	1	$\checkmark$	X	
$P_3$	1	$\checkmark$	✓	
$P_4$	•	X	✓	

## Defining sets

To define a set using **roster method**, explicitly list its elements. That is, start with { then list elements of the set separated by commas and close with }.

To define a set using **set builder definition**, either form "The set of all x from the universe U such that x is ..." by writing

$$\{x \in U \mid ...x...\}$$

or form "the collection of all outputs of some operation when the input ranges over the universe U" by writing

$$\{...x... \mid x \in U\}$$

We use the symbol  $\in$  as "is an element of" to indicate membership in a set.

**Example sets**: For each of the following, identify whether it's defined using the roster method or set builder notation.
